

# TITANIUM

Eyewear collection 2026

# KALEIDOSCOPE

## Titanium Reframed

Kaleidoscope is our exploration of titanium as a living material. Lightweight yet architectural, precise yet expressive, the collection balances optical performance with sculptural design.

Designed in Barcelona and handmade in Japan, each frame reflects our belief that technical mastery should feel effortless.

# SIGNATURE CONSTRUCTION

## Kaleidoscope Titanium Collection

### Sculpted titanium nose pads

Our nose pads are crafted entirely from titanium, going beyond standard functionality. Micro-ridged surfaces distribute pressure evenly while naturally regulating humidity, ensuring comfort throughout the day. To enhance durability and visual the titanium is galvanically coated in 18k gold, platinum, or palladium

### Modular Nose Pad Architecture

The attachment of the titanium pads to the front differs from standardized methods. A custom-made acetate component, crafted from original M49 in the same color as the temple tips, flexibly connects the titanium pad to the pad arm. If a silicone pad is preferred, or the color needs to be changed, this can be done easily using the secure micro-screw connection.

### Ultra-thin faceted rims

Measuring just 0.45 mm at the front, the ultra-thin faceted rims create a lightweight visual impression while preserving structural integrity. A sculpted depth of 3.5 mm accommodates thicker lenses without added bulk, combining precision engineering with refined design.

### Seamless Hing Construction

Designed for a seamless transition into the temples, the hinges feature a barely perceptible hairline gap for visual continuity and a precise, secure fit. Faceted surfaces interact with light to enhance the frame's architectural definition.

BARCELUNETTES
